May 2<sup>nd</sup>, 2012

*Experience on I-I  
reporting*

# Existing I-I reports on credit risk exposures

	Large Exposures	Risk management report on concentration	FED SSG report
Scope	Prudential Group credit exp. >10% Group Equity > 300m€ (national discretion)	Prudential Group credit Exposures <ul style="list-style-type: none"> <li>•Top financial institutions</li> <li>•Top sovereigns</li> <li>•Top corporates</li> </ul>	Prudential Group credit Exposures <ul style="list-style-type: none"> <li>•top 20 banks and brokers</li> <li>•top 20 other financial institutions</li> <li>•top 20 corporates (sovereigns excluded)</li> </ul>
Frequency	Quarterly at D+30	Monthly D+30	<ul style="list-style-type: none"> <li>• Capital market activities : bi-weekly D+10</li> <li>• Lending activities : monthly D+30</li> </ul>
Metrics	<ul style="list-style-type: none"> <li>• Loans : gross exposures and L.Exp RWA</li> <li>• Derivatives : EPE and L.Exp RWA</li> <li>• Equity : market value (usually 100% weight)</li> </ul>	<ul style="list-style-type: none"> <li>• Loans : gross exposure and RWA</li> <li>• Derivatives : current exposure</li> </ul>	<ul style="list-style-type: none"> <li>• Loans : gross exposures</li> <li>• Derivatives : potentiel future exposure</li> </ul>
Counterparty aggregation	Business Group (incl. business dependency)	Business Group (only capitalistic ownership)	Business Group (only capitalistic ownership)
Controls	<ul style="list-style-type: none"> <li>• Permanent control on risk data quality</li> <li>• Business &amp; Risk review</li> <li>• Reconciliation of risk total exposures with financial statements</li> </ul>	<ul style="list-style-type: none"> <li>• Permanent control on risk data quality</li> <li>• Business &amp; Risk review at local and central level</li> </ul>	<ul style="list-style-type: none"> <li>• Permanent control on risk data quality</li> <li>• Business &amp; Risk review at local and central level</li> </ul>

# Existing I-I report on credit risk exposures

- Timing of risk reporting depends on activities :

- Capital Market activities

Managed as one global business across the world

Short term positions

Volatile market

A unique risk system for the whole Group

Daily positions are available

Frequent and timeliness management reports

- Lending activities

Managed at local level (limits are decentralized by regions, entities)

Medium and long term positions

Few volatility

Monthly management reports  
+ quarterly reconciled with financial statements

Structural delay in risk aggregation (d+30), for :

- data production and controls at local level
- data collection from the regional risk systems
- data consolidation
- central controls

# Existing I-I report on credit risk exposures

- Prudential vs Accounting scope

- Credit exposures in insurance companies cannot be compared nor added to credit exposures in the banking industry
  - The largest majority of credit risk is supported by life insurance contracts
  - Credit risk is mainly allocated to insured customers (“participation to benefits” mechanism).
  - Credit risk metrics are calculated differently (actuarial provisions)
  - Insurance contracts are long term. The impact of credit deterioration is spread over the residual timelife of insurance contracts.
- Banking supervisors and Insurance supervisors rely on different regulatory reportings that fit the best to each activity
- One common report on top-50 counterparties is produced annually on d+75, for financial conglomerates supervision.

# Existing I-I reports on liquidity providers

- No regulatory reporting yet
- Banks are conducting large projects to meet Basel III liquidity requirements by 2015.
- Internal management reports are organized by activity, for example:
  - Treasury short-term funding :
    - Daily reports by liquidity provider (legal entity)
  - ALM medium-term funding :
    - No report by counterparty (impossible to trace debts instruments holders) but by distribution channels (retail, securities market, etc...)
